DEPARTMENT COMPUTER APPLICATION

WEB PROGRAMMING

LAB MANUAL – NEP SYLLABUS

SEMESTER : V

COURSE CODE :CA-C25L

SYLLABUS

1. Create a form with the elements of Textboxes, Radio buttons, Checkboxes, and so on. Write JavaScript code to validate the format in email, and mobile number in 10 characters, If a textbox has been left empty, popup an alert indicating when email, mobile number and textbox has been left empty.
2. Develop an HTML Form, which accepts any Mathematical expression. Write JavaScript code to Evaluate the expression and Display the result.
3. Create a page with dynamic effects. Write the code to include layers and basic animation.
4. Write a JavaScript code to find the sum of N natural Numbers. (Use userdefined function)
5. Write a JavaScript code block using arrays and generate the current date in words, this should include the day, month and year.
6. Create a form for Student information. Write JavaScript code to find Total, Average, Result and Grade.
7. Create a form for Employee information. Write JavaScript code to find DA, HRA, PF, TAX, Gross pay, Deduction and Net pay.
8. Write a program in PHP to change background color based on day of the week using if else if statements and using arrays .
9. Write a simple program in PHP for i) generating Prime number ii) generate Fibonacci series.
10. Write a PHP program to remove duplicates from a sorted list
11. Write a PHP Script to print the following pattern on the Screen:

```
*****
****
***
**
*
```
12. Write a simple program in PHP for Searching of data by different criteria
13. Write a function in PHP to generate captcha code
14. Write a program in PHP to add, update and delete using student database.
15. Write a program in PHP to Validate Input
16. Write a program in PHP for setting and retrieving a cookie
17. Write a PHP program to Create a simple webpage of a college.
18. Write a program in PHP for exception handling for i) divide by zero ii) checking date format.

INDEX

S.NO	EXPERIMENT	PAGE NUMBER
1	FORM VALIDATION	1
2	EVALUATE MATHEMATICAL EXPRESSION	3
3	DYNAMIC EFFECTS	5
4	SUM OF N NATURAL NUMBERS	7
5	CURRENT DATE IN WORDS	9
6	STUDENT INFORMATION	11
7	EMPLOYEE INFORMATION	13
8	CHANGE BACKGROUNG COLOR	15
9	PRIME NUMBER AND FIBONACCI SERIES	17
10	REMOVE DUPLICATES FROM SORTED LIST	19
11	PATTERN PRINTING	21
12	SEARCHING OF DATA	23
13	GENERATE CAPTCHA CODE	25
14	STUDENT DATABASE	27
15	VALIDATE INPUT	30
16	COOKIE	33
17	WEB PAGE OF COLLEGE	35
18	EXCEPTION HANDLING	37

PROGRAM NO -1

OBJECTIVE:

Create a form with the elements of Textboxes, Radio buttons, Checkboxes, and so on. Write JavaScript code to validate the format in email, and mobile number in 10 characters, If a textbox has been left empty, popup an alert indicating when email, mobile number and textbox has been left empty.

PROCEDURE:

1. Open Notepad
2. Write JavaScript code
3. save file, and give it a name that ends with “.html” extension

SOURCE CODE:

```
<html>
<head>
  <title>Form Validation</title>
</head>
<body>
  <h2>Contact Form</h2>
  <form>
    Name:<input type="text" id="name" name="name"><br>
    Email:<input type="text" id="email" name="email"><br>
    Mobile Number:<input type="text" id="mobile" name="mobile"><br>
    Gender:<input type="radio" id="male" name="gender" value="male">Male
      <input type="radio" id="female" name="gender" value="female">Female<br>
    Hobbies: Reading<input type="checkbox" id="reading" name="hobbies"
value="reading">
      Gaming<input type="checkbox" id="gaming" name="hobbies" value="gaming">
    <br>
    <input type="submit" value="Submit" onclick="val()">
  </form>
  <script>
    function val()
    {
      var name = document.getElementById('name').value;
      var email = document.getElementById('email').value;
      var mobile = document.getElementById('mobile').value;
      if (name.trim()==''||email.trim()==''||mobile.trim()=='') {
        alert('Please fill out all fields.');
        return;
      }
    }
  </script>
</body>
</html>
```

```
var emailRegex = /^[^\s@]+@[^\s@]+\.[^\s@]+$/;  
if (!emailRegex.test(email)) {  
    alert('Please enter a valid email address.');
```

```
    return;  
}  
if (mobile.length !== 10 || isNaN(mobile)) {  
    alert('Please enter a valid 10-digit mobile number.');
```

```
    return;  
}  
console.log('Form submitted successfully!');
```

```
}  
</script>  
</body>  
</html>
```

OUTPUT:

The screenshot shows a web browser window with the address bar displaying the file path: `E:\wp%20pgrm\one.html?name=CHITHRA+ES&email=chithra.es%40gmail.com&mobile=1111111111&gender=female&hobbies=reading`. The page content includes a 'Contact Form' with the following fields and options:

- Name:
- Email:
- Mobile Number:
- Gender: ☐ Male ☐ Female
- Hobbies: Reading ☐ Gaming ☐
- Submit:

An alert dialog box is displayed in the center of the browser window with the text: "This page says Please fill out all fields." and an "OK" button.

At the bottom right of the browser window, there is a watermark that says "Activate Windows Go to Settings to activate Windows."

PROGRAM NO -2**OBJECTIVE:**

Develop an HTML Form, which accepts any Mathematical expression. Write JavaScript code to Evaluate the expression and Display the result.

PROCEDURE:

1. Open Notepad
2. Write JavaScript code
3. save file, and give it a name that ends with “.html” extension

SOURCE CODE:

```
<html>
<head>
<title>Math Expression Evaluator</title>
</head>
<body>
<h2>Math Expression Evaluator</h2>
<form>
Enter a Mathematical Expression:<input type="text" id="expression" name="expression"><br>
<input type="submit" value="Evaluate" onClick="evaluateExpression()">
</form>
<script>
function evaluateExpression() {
var expressionInput=document.getElementById('expression').value;
var res=eval(expressionInput);
document.write("Result="+res);
}
</script>
</body>
</html>
```

OUTPUT:

← → ↻ ① File | E:/wp%20prgm/one.html?expression=1%2B2

Math Expression Evaluator

Enter a Mathematical Expression:

Activate Windows
Go to Settings to activate Windows.

PROGRAM NO -3**OBJECTIVE:**

Create a page with dynamic effects. Write the code to include layers and basic animation.

PROCEDURE:

1. Open Notepad
2. Write JavaScript code
3. save file, and give it a name that ends with “.html” extension

SOURCE CODE:

```
<head>
  <title>Dynamic Effects Page</title>
  <style>
    body {
      margin: 0;
      overflow: hidden;
    }
    .layer {
      position: absolute;
      width: 100%;
      height: 100%;
      transition: transform 1s ease-in-out;
    }
    #layer1 {
      transform: translateY(-100%);
      background-color:red;
    }
    #layer2 {
      transform: translateY(100%);
      background-color:green;
    }
  </style>
</head>
<body>
  <div class="layer" id="layer1"></div>
  <div class="layer" id="layer2"></div>
  <script>
    document.addEventListener('DOMContentLoaded', function() {
      // Animate layers on page load
      animateLayer('layer1', 0);
      animateLayer('layer2', 0);
    });
  </script>
```

```
});  
function animateLayer(layerId, delay) {  
    var layer = document.getElementById(layerId);  
    // Use setTimeout to create a delay before applying the animation  
    setTimeout(function() {  
        // Apply animation by setting transform to translateY(0)  
        layer.style.transform = 'translateY(0)';  
    }, delay);  
}  
</script>  
</body>  
</html>
```

OUTPUT:

PROGRAM NO -4**OBJECTIVE:**

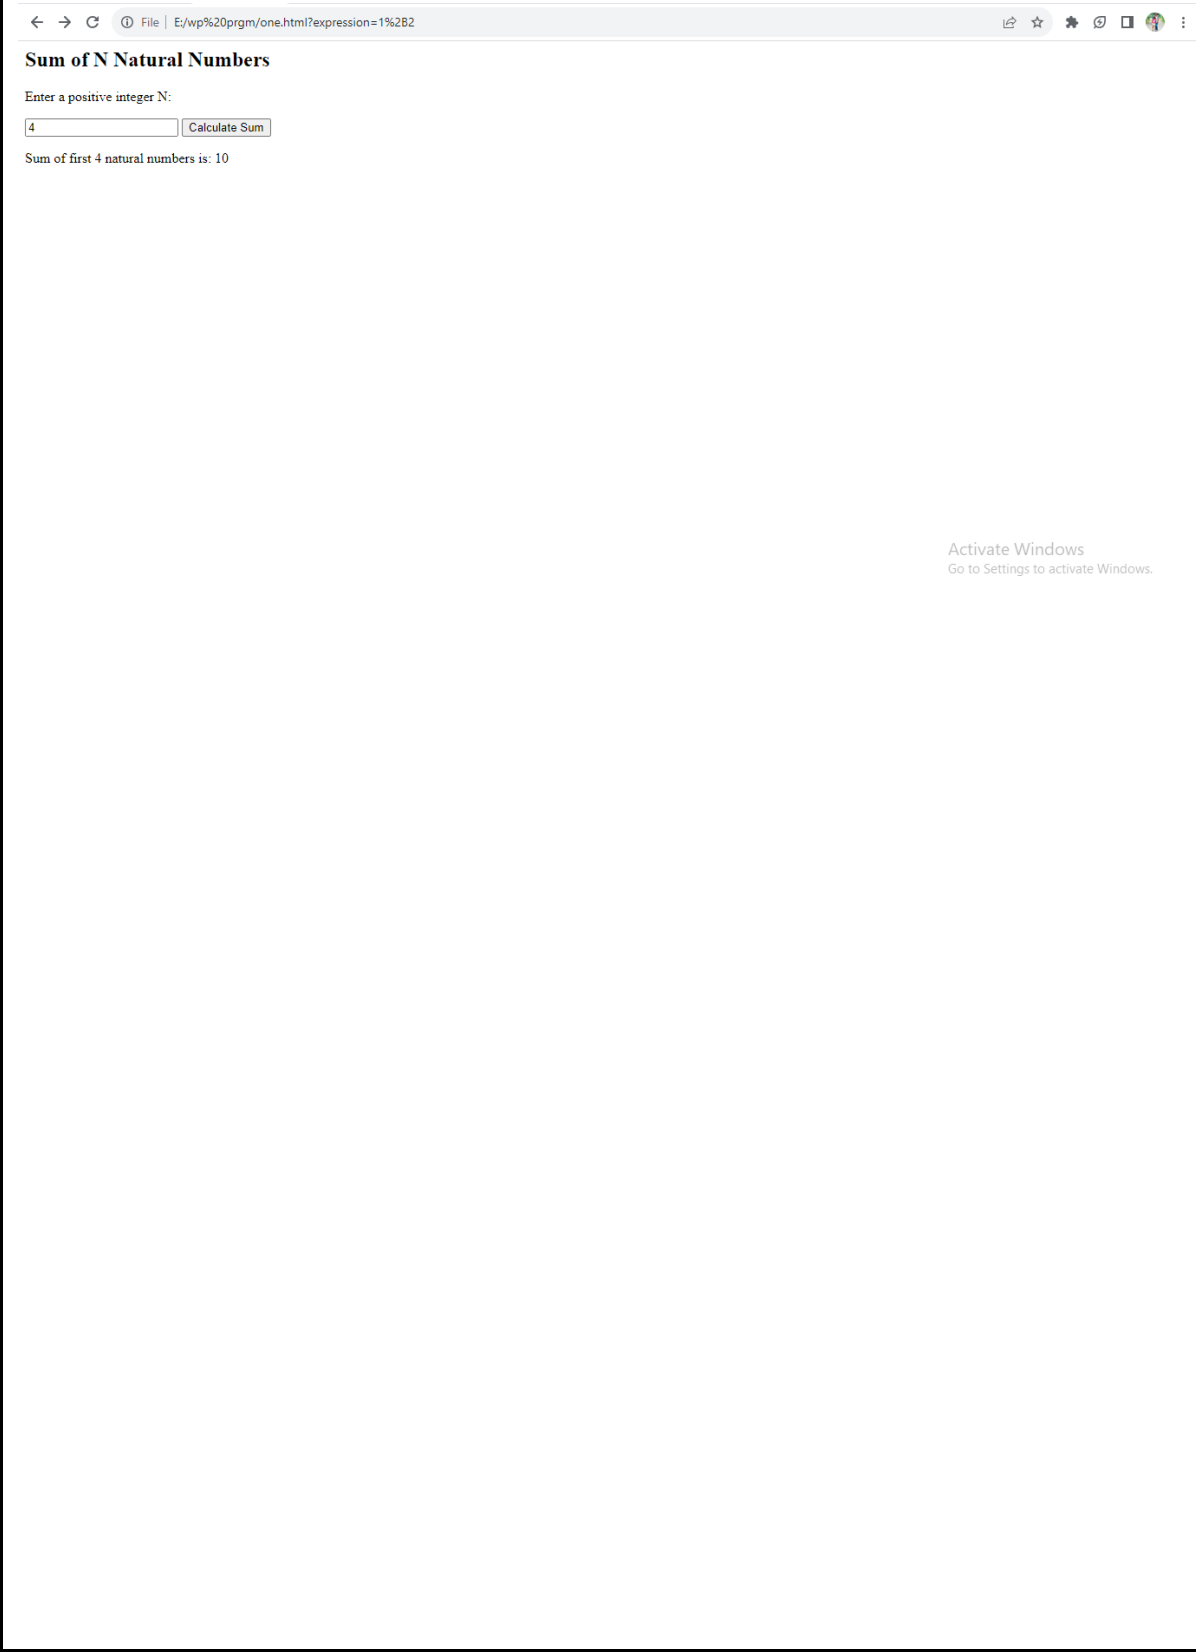

Write a JavaScript code to find the sum of N natural Numbers. (Use userdefined function).

PROCEDURE:

1. Open Notepad
2. Write JavaScript code
3. save file, and give it a name that ends with “.html” extension

SOURCE CODE:

```
<html>
<head>
  <title>Sum of N Natural Numbers</title>
</head>
<body>
  <h2>Sum of N Natural Numbers</h2>
  <p>Enter a positive integer N:</p>
  <input type="number" id="inputNumber">
  <button onclick="calculateSum()">Calculate Sum</button>
  <p id="result"></p>
  <script>
    function calculateSum() {
      var n = document.getElementById('inputNumber').value;
      if (n <= 0) {
        alert('Please enter a positive integer.');
```

OUTPUT:

← → ↻ File | E:/wp%20prgm/one.html?expression=1%2B2

Sum of N Natural Numbers

Enter a positive integer N:

Sum of first 4 natural numbers is: 10

Activate Windows
Go to Settings to activate Windows.

PROGRAM NO -5**OBJECTIVE:**

Write a JavaScript code block using arrays and generate the current date in words, this should include the day, month and year.

PROCEDURE:

1. Open Notepad
2. Write JavaScript code
3. save file, and give it a name that ends with “.html” extension

SOURCE CODE:

```
<html>
<head>
  <title>Current Date in Words</title>
</head>
<body>
  <h2>Current Date in Words</h2>
  <p id="currentDate"></p>
  <script>
    // Array of month names
    var monthNames = ['January', 'February', 'March', 'April', 'May', 'June', 'July', 'August',
      'September', 'October', 'November', 'December'];
    // Get the current date
    var currentDate = new Date();
    // Get day, month, and year components
    var day = currentDate.getDate();
    var monthIndex = currentDate.getMonth();
    var year = currentDate.getFullYear();
    // Get the month name from the array
    var monthName = monthNames[monthIndex];
    // Display the current date in words
    var currentDateInWords = 'Today is ' + monthName + ' ' + day + ', ' + year;
    document.getElementById('currentDate').innerText = currentDateInWords;
  </script>
</body>
</html>
```

OUTPUT:

← → ↻ ⓘ File | E:/wp%20prgm/one.html?expression=1%2B2

Current Date in Words

Today is October 9, 2023

Activate Windows
Go to Settings to activate Windows.

PROGRAM NO -6**OBJECTIVE:**

Create a form for Student information. Write JavaScript code to find Total, Average, Result and Grade.

PROCEDURE:

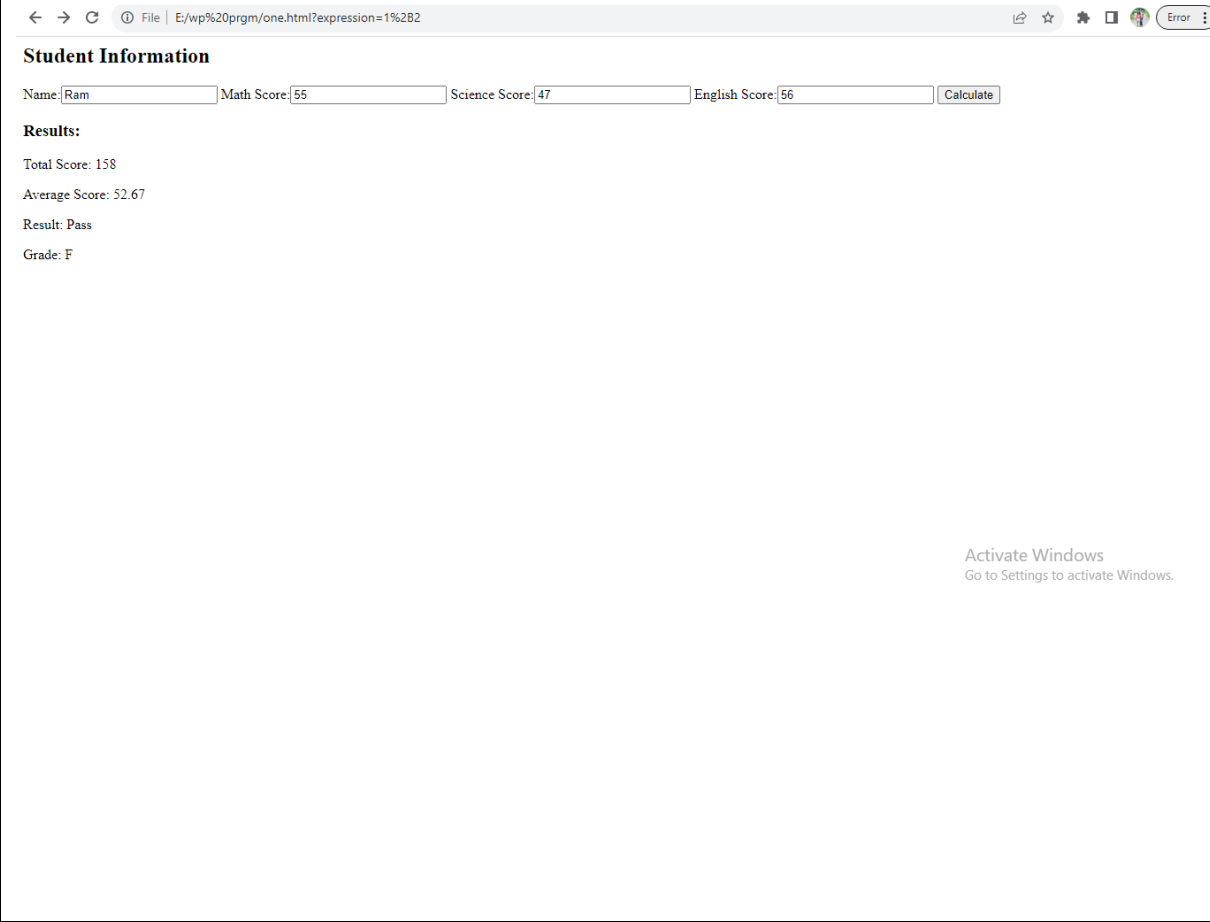

1. Open Notepad
2. Write JavaScript code
3. save file, and give it a name that ends with “.html” extension

SOURCE CODE:

```
<html>
<head>
  <title>Student Information Form</title>
</head>
<body>
  <h2>Student Information</h2>
  <form>
    Name:<input type="text" id="name" name="name">
    Math Score:<input type="number" id="math" name="math">
    Science Score:<input type="number" id="science" name="science">
    English Score:<input type="number" id="english" name="english" required>
    <input type="button" value="Calculate" onclick="calculateResults()">
  </form>
  <h3>Results:</h3>
  <p>Total Score: <span id="total"></span></p>
  <p>Average Score: <span id="average"></span></p>
  <p>Result: <span id="result"></span></p>
  <p>Grade: <span id="grade"></span></p>
  <script>
    function calculateResults() {
      var math = parseFloat(document.getElementById('math').value);
      var science = parseFloat(document.getElementById('science').value);
      var english = parseFloat(document.getElementById('english').value);
      // Validate if the scores are valid numbers
      if(isNaN(math) || isNaN(science) || isNaN(english)){
        alert('Please enter valid numeric scores.');
        return;
      }
      // Calculate total, average, result, and grade
      var total = math + science + english;
      var average = total / 3;
      var result = (average >= 40) ? 'Pass' : 'Fail';
```

```
var grade;
if (average >= 90) {
    grade = 'A';
} else if (average >= 80) {
    grade = 'B';
} else if (average >= 70) {
    grade = 'C';
} else if (average >= 60) {
    grade = 'D';
} else {
    grade = 'F';
}
document.getElementById('total').innerText = total;
document.getElementById('average').innerText = average.toFixed(2);
document.getElementById('result').innerText = result;
document.getElementById('grade').innerText = grade;
}
</script>
</body>
</html>
```

OUTPUT:

The screenshot shows a web browser window with the address bar displaying "File | E:/wp%20prgm/one.html?expression=1%2B2". The page content includes a section titled "Student Information" with input fields for "Name" (containing "Ram"), "Math Score" (55), "Science Score" (47), and "English Score" (56), followed by a "Calculate" button. Below this is a "Results:" section displaying the following information: "Total Score: 158", "Average Score: 52.67", "Result: Pass", and "Grade: F". At the bottom right of the browser window, there is a watermark that says "Activate Windows" and "Go to Settings to activate Windows."

PROGRAM NO -7

OBJECTIVE:

Create a form for Employee information. Write JavaScript code to find DA, HRA, PF, TAX, Gross pay, Deduction and Net pay.

PROCEDURE:

1. Open Notepad
2. Write JavaScript code
3. save file, and give it a name that ends with “.html” extension

SOURCE CODE:

```
<html>
<head>
  <title>Employee Information Form</title>
</head>
<body>
  <h2>Employee Information</h2>
  <form>
    Employee Name:<input type="text" id="employeeName"
name="employeeName"><br>
    Basic Salary:<input type="number" id="basicSalary" name="basicSalary"><br>
    HRA Percentage:<input type="number" id="hraPercentage"
name="hraPercentage"><br>
    DA Percentage:<input type="number" id="daPercentage" name="daPercentage"><br>
    Tax Percentage:<input type="number" id="taxPercentage" name="taxPercentage"
required><br>
    <input type="button" value="Calculate" onclick="calculateSalary()">
  </form>
  <h3>Salary Details:</h3>
  <p>DA: <span id="da"></span></p>
  <p>HRA: <span id="hra"></span></p>
  <p>PF: <span id="pf"></span></p>
  <p>TAX: <span id="tax"></span></p>
  <p>Gross Pay: <span id="grossPay"></span></p>

    document.getElementById('netPay').innerText = netPay.toFixed(2);
}
</script>
</body>
</html>
```

OUTPUT:

Employee Information

Employee Name:

Basic Salary:

HRA Percentage:

DA Percentage:

Tax Percentage:

Salary Details:

DA: 1500.00

HRA: 3000.00

PF: 3600.00

TAX: 3000.00

Gross Pay: 34500.00

Deduction: 6600.00

Net Pay: 27900.00

Activate Windows
Go to Settings to activate Windows.

PROGRAM NO -8**OBJECTIVE:**

Write a program in PHP to change background color based on day of the week using if else if statements and using arrays .

PROCEDURE:

1. Open Notepad
2. Write php code
3. save file in C:\wamp64\www, and give it a name that ends with “.php” extension
4. Open WAMP
5. Type localhost/filename.php

SOURCE CODE:

```
<?php
$days=array(0=>"blue",1=>"green", 2=>"red", 3=>"purple", 4=>"yellow", 5=>"cyan",
6=>"orange");
$today = date('w');
    $defaultColor = '#FFFFFF';
    if (array_key_exists($today, $days)) {
        echo '<body style="background-color:' . $days[$today] . '">';
    } else {
        return $defaultColor;
    }
?>
```

OUTPUT:

PROGRAM NO -9**OBJECTIVE:**

Write a simple program in PHP for i) generating Prime number ii) generate Fibonacci series.

PROCEDURE:

1. Open Notepad
2. Write php code
3. save file in C:\wamp64\www, and give it a name that ends with “.php” extension
4. Open WAMP
5. Type localhost/filename.php

SOURCE CODE:

```
<?php
echo "Prime Number";
$count=0;
$num=2;
while($count<15)

```

OUTPUT:

The screenshot displays a web browser window with a single tab titled "Student Registration". The address bar shows the URL "localhost/stud.html". The browser's toolbar includes various icons for navigation and utility. Below the address bar, a horizontal menu contains links to "SBI Online", "EDFS- SBI", "SIB Online", "Gmail", "WhatsApp", "E-WayBill", "GST Portal", "ROUTER", "Search", "DMS Login", "EXTRANET", and "https://intranet.baja...". The main content area of the browser contains a registration form with the following fields and buttons:

- A text input field labeled "Name:" containing the text "ABC".
- A text input field labeled "Course:" containing the text "BCA".
- A button labeled "Registration".

The Windows taskbar is visible at the bottom of the screen, showing the search bar, taskbar icons, system tray, and the date/time "2:03 PM 10/12/2023".

PROGRAM NO -15**OBJECTIVE:**

Write a program in PHP to Validate Input

PROCEDURE:

1. Open Notepad
2. Write php code
3. save file in C:\wamp64\www, and give it a name that ends with “.php” extension
4. Open WAMP
5. Type localhost/filename.php

SOURCE CODE:

```
<html>
<head>
    <title>Input Validation</title>
</head>
<body>
<?php
$nameErr = $emailErr = $ageErr = "";
$name = $email = $age = "";
function test_input($data) {
    $data = trim($data);
    $data = stripslashes($data);
    $data = htmlspecialchars($data);
    return $data;
}
if ($_SERVER["REQUEST_METHOD"] == "POST") {
    if (empty($_POST["name"])) {
        $nameErr = "Name is required";
    } else {
        $name = test_input($_POST["name"]);
        if (!preg_match("/^[a-zA-Z ]*$/", $name)) {
            $nameErr = "Only letters and white space allowed";
        }
    }
}
if (empty($_POST["email"])) {
    $emailErr = "Email is required";
} else {
    $email = test_input($_POST["email"]);
    if (!filter_var($email, FILTER_VALIDATE_EMAIL)) {
        $emailErr = "Invalid email format";
    }
}
```

```
    }
  }
  if (empty($_POST["age"])) {
    $ageErr = "Age is required";
  } else {
    $age = test_input($_POST["age"]);
    if (!is_numeric($age)) {
      $ageErr = "Age must be a number";
    }
  }
}
?>
<form method="post" action="<?php echo htmlspecialchars($_SERVER["PHP_SELF"]); ?>">
  <label for="name">Name:</label>
  <input type="text" name="name">
  <span class="error"><?php echo $nameErr; ?></span>
  <br><br>

  <label for="email">Email:</label>
  <input type="text" name="email">
  <span class="error"><?php echo $emailErr; ?></span>
  <br><br>

  <label for="age">Age:</label>
  <input type="text" name="age">
  <span class="error"><?php echo $ageErr; ?></span>
  <br><br>

  <input type="submit" name="submit" value="Submit">
</form>

<?php
// Display the submitted data
if ($_SERVER["REQUEST_METHOD"] == "POST" && empty($nameErr) &&
empty($emailErr) && empty($ageErr)) {
  echo "<h2>Submitted Data:</h2>";
  echo "Name: $name <br>";
  echo "Email: $email <br>";
  echo "Age: $age <br>";
}
?>
</body>
</html>
```

OUTPUT:

Input Validation

localhost/val.php

Name: Name is required

Email: Email is required

Age: Age is required

PROGRAM NO -16**OBJECTIVE:**

Write a program in PHP for setting and retrieving a cookie

PROCEDURE:

1. Open Notepad
2. Write php code
3. save file in C:\wamp64\www, and give it a name that ends with “.php” extension
4. Open WAMP
5. Type localhost/filename.php

SOURCE CODE:

```
<?php
// Set a cookie
$cookie_name = "user";
$cookie_value = "John";
$cookie_expire = time() + 86400; // 86400 seconds = 1 day
setcookie($cookie_name, $cookie_value, $cookie_expire); // Parameters: name, value, expiration
time, path
// Check if the cookie is set and retrieve its value
if (isset($_COOKIE[$cookie_name])) {
    $user = $_COOKIE[$cookie_name];
    echo "Welcome, $user!";
} else {
    echo "Cookie named '$cookie_name' is not set.";
}
?>
```

<h2 align="center" style="color: black;">About College </h2>
<p style="font-family:courier";>Acharya Institute of Graduate Studies, or AIGS, is a private co-
educational engineering and management college in Bengaluru, India, affiliated with the
Bangalore University (BU) and accredited by the National Assessment and Accreditation
Council
(NAAC). Established in 2005, it offers seven undergraduate courses and nine postgraduate
courses.
Acharya organises the Acharya Habba, an annual two-day intercollegiate cultural festival that is
one of the largest in Bengaluru and Karnataka.
The Deccan Herald lists AIGS as one of the "notable" colleges to apply the Karnataka
Management Aptitude Test (KMAT) for admission to postgraduate management courses.
